

Mohd Zaid

Applied AI Engineer

Software Engineer with 2+ years of hands-on experience shipping production systems using Go, TypeScript, and Python. Currently a Forward Deployed Engineer at General Machines, building shopping agents and agentic payments. Founding engineer at DEnergy and Trench. I take interest in owning systems entirely from architecture to production.

WORK EXPERIENCE

General Machines | Forward Deployed Engineer

Bangalore, India | Sept 2026 - Present

- Built shop-harness (Python, Ollama, Shopify UCP MCP), an agent that shops live Shopify stores and pays - 300+ traced runs across 7 stores.
- Wrote the rules and checkout gate that re-check every cart in code, cut store replies ~45x, and graded runs on 13 hand-written tasks.
- Built checkout-sandbox, a Python service that charges real Shopify carts in Stripe test mode with shared payment tokens capped at the approved total.
- Added cart re-pricing, idempotent retries, and fault injection (declines, 3DS, expired tokens); 19 live acceptance checks pass on Stripe.

DEnergy Networks Ltd. | Founding Engineer

Ras Al-Khaimah, UAE (Remote) | Jan 2025 - Sept 2026 | 1 year 9 months

- Built an EVM-compatible Layer-1 blockchain forked from Evmos (Go, Cosmos SDK, CometBFT) with custom modules for energy tracking and staking rewards - took it from testnet to a live mainnet on 50+ nodes.
- Built LLM agentic skills to automate testing of new features and handle releases; guided peers on cutting token usage and managing context.
- Fixed production issues on a live chain - a network halt, a consensus fork between binary versions, a memory leak on public RPC nodes, and a reward accounting bug.
- Shipped 7 on-chain upgrades to mainnet without downtime, timed with the validator set and validated with security auditors before each release.
- Wrote integration tests for the staking, rewards, and epoch modules (proved with mutation testing), and automated releases with Bash and GitHub Actions.

Mable | Software Development Engineer (Intern)

Karlsruhe, Germany (Remote) | Aug 2023 - July 2024 | 11 months

- Implemented live DB partitioning using pg_partman on PostgreSQL, cutting query latency from ~2s to ~500ms.
- Built RESTful APIs with Redis caching and connection pooling with sub-10ms response times for 100K+ daily requests.
- Built RBAC authentication for an internal DB API using Casbin and chi middleware, from access policies to a tested POC.
- Wrote unit, integration, and functional tests in Go and TypeScript, reaching ~95% coverage; helped debug event drops across the distributed system.
- Participated in Code Reviews and Sprint Planning.

📍 Hyderabad, India

SKILLS

LLMs, AI Agents, MCP, Agentic Development, UCP, ACP, AP2, Stripe Agentic Payments, Go, TypeScript, Python, C/C++, REST APIs, NodeJS, ExpressJS, gRPC/protobuf, WebSockets, Solidity, NextJS, ReactJS, TailwindCSS, PostgreSQL, Redis, MongoDB, AWS (EC2, S3, ALB, RDS), Docker, Docker Compose, JavaScript, Terraform (familiar), GitHub Actions, Linux, Bash, Unit Testing, Integration Testing, DSA, OS

PROJECTS

PyREX - Cross-border payment system with multi-agent routing, orderbook management (Node.js + PostgreSQL), and PYUSD stablecoin settlements.

Trench - Real-time wallet & token data platform; REST APIs (Express + TypeScript) for 10K+ concurrent users, Redis Pub/Sub + PostgreSQL streaming 10M+ live records, pg_partman partitioning cutting query time ~40%.

Aptos NFT Indexer - Real-time blockchain indexer in Python processing 10M+ transactions/day; optimised retrieval from $O(n^2)$ to $O(n)$ using hash indexing.

OD Automation SRM - Blockchain-signed student leave management system serving 5,000+ users across SRM University.

Datalync - Full-stack ed-tech platform (React + TypeScript + Node.js), Razorpay gateway, JWT single-device auth, 100+ concurrent users.

Otaku Verse - Best DApp at Layer 2.0 Hackathon. Anime streaming with rank-based NFT rewards on Shardeum (Solidity/EVM).

EDUCATION

SRM University - KTR, Tamil Nadu

B.Tech in Computer Science and Engineering
July 2021 - June 2025 | GPA: 8.86/10

AWARDS & ACHIEVEMENTS

- Best DApp Winner - Hackverse (Apr 2024)
- Best DApp Builder - Layer 2.0 (Mar 2024)
- Best Open Innovation - MesoHacks (Sept 2022)

Certifications: C for Everyone: Programming Fundamentals (Coursera) | Web Application Technologies and Django (Coursera)

Languages: Fluent in English, Hindi, and Tamil
