PROFILE

Software Engineer with 2+ year of professional experience building backend systems using Go and TypeScript. Developed a blockchain network at the protocol level for DEnergy, shipping it to production across 100+ nodes, while building Agentic Workflows utilising LLMs such as Claude for efficiency and reliability. Designed and shipped backend systems streaming 10M+ records using Postgres and Redis at Trench. Proficient in linux scripting for testing and managing the full Software Development Life Cycle.

SKILLS

Languages: Go, TypeScript, Python, JavaScript, C/C++

Backend & Systems: REST APIs, gRPC/protobuf, WebSockets, Microservices, Distributed Systems, Authentication, JWT, Caching, Load Balancing, Middlewares, RabbitMQ (familiar)

Databases: PostgreSQL, Redis, MongoDB

Cloud & Infra: AWS (EC2, S3, ALB, RDS), Docker, Docker Compose, Terraform (familiar)

CI/CD & Ops: Linux, Git, Bash Scripting

Testing & Quality: Unit testing, Integration testing, Regression testing, Code reviews, Debugging

WORK EXPERIENCE

DEnergy Networks Ltd. | Software Development Engineer

Ras Al-Khaimah, UAE (Remote) · Jan 2025 - Present

- Built and maintained distributed backend services in Go across 50+ nodes, implementing service-to-service communication using gRPC + protobuf on a production environment
- Developed energy tracking across all the active nodes in the network
- Developed LLM Agentic Skills to automate testing of new features and handle releases; guided peers into optimising token consumption and context management for higher efficiency
- Worked directly with security auditors and protocol researchers across time zones to validate protocol behavior before releases
- Developed Bash scripts to build and release binaries via GitHub Actions; reduced Docker image build time by caching stable dependencies
- Documented system architecture, APIs, and operational runbooks

Trench | Software Developer (Part-Time Consultant)

Bangalore, India · Dec 2024 - June 2025

- Built **REST APIs** using **ExpressJS** and **TypeScript** for user's wallet holdings and token records to handle **10K+ users** concurrently
- Designed and developed Redis Pub/Sub alongside a PostgreSQL database to stream 10M+ live records to users, reducing overhead on external Websocket and API costs
- Designed the database schema and partitioned tables using pg_partman reducing query time by ~40%
- Contributed in reviewing Product Design and UX of various pages across the application
- Developed API Documentation and communicated with Frontend Team to integrate the developed APIs

Mable | Software Development Engineer Intern

Karlsruhe, Germany (Remote) · Aug 2023 - July 2024

- Implemented live DB partitioning using pg_partman on PostgreSQL, cutting query latency from ~2s to ~500ms
- Built RESTful APIs with Redis caching and connection pooling with sub-10ms response times for 100K+ daily requests
- Contributed in debugging event-drops across a distributed system architecture
- Wrote unit, integration, and functional tests in Go and TypeScript, reaching ~95% coverage
- Participated in Code Reviews and Sprint Planning

EDUCATION

SRM University - KTR, Tamil Nadu, India

B.Tech in Computer Science and Engineering

July 2021 - June 2025 · GPA: 8.86/10

PROJECTS

Datalync | Ed-Tech Website

- Built JWT-based single-device auth with session management, reducing unauthorized access by 95%
- Developed Authentication and REST APIs for Client-Server Communication
- Built full-stack education platform serving 100+ concurrent users with 99.9% uptime
- Built the entire Client-side using React and TypeScript - responsive layouts, admin dashboard, course management, and user-specific pages
- Contributed to Backend System and Database Design
- Integrated Razorpay payment gateway processing \$1K+ in monthly transactions

PyREX | Intelligent Cross-Border Payment System

- Developed smart payment routing agents using Python for faster and efficient payment route selection and payment splitting across different buyers
- Designed the application architecture introducing multi agent communication and REST APIs for off-ramp transactions
- Developed orderbook management system using NodeJS and PostgreSQL
- Studied and Integrated Paypal (PYUSD) SDK onto the application for secure stablecoin settlements

Aptos NFT Marketplace Indexer

Project Lead

- Designed and developed a real-time blockchain indexer, using Python, processing 10M+ transactions/day
- Reduced parsing complexity from $O(n^2)$ to $O(n)$ on transaction retrieval paths by introducing hash index, optimizing performance by 60%

OD Automation SRM

Project Manager

- Built a student OD/Leave management system serving 5,000+ users, featuring blockchain cryptographic signatures to eliminate paper workflows across the university
- Managed a team of 5 Students, coordinating across UI/UX, Frontend and Backend Teams to develop the application
- Conducted Code Reviews and enhanced UI/UX of the portal
- Wrote setup docs and API/workflow documentation

LEADERSHIP

Blockchain Club SRM

Associate Lead (Technical) · SRMIST, India · 2022-2024

- Designed and Proposed a new OD Automation System for managing OD Applications of student, using Cryptographic Signatures, across the University
- Led and managed a team of 5+ students to build the OD Automation Project guiding them through the entire Software Development Life Cycle
- Managed Layer 2.0 (hackathon) for 500+ participants, coordinating technical workshops and judging criteria

SRMKZILLA

Associate Lead (Technical) · SRMIST, India · 2021-2023

- Built the internal event management portal on NextJS and Tailwind used across the annual event, with features such as Authentication, Scoreboard, Admin Dashboard etc.
- Contributed building Sandesh (an open-source mass emailer), utilising AWS SES
- Speaker at 2 technical workshops training 50+ students through hands-on exercises on NodeJS Backend Servers and Authentication/Authorization using JWT Tokens

ADDITIONAL

Languages: Fluent in English, Hindi, and Tamil

Certifications: C for Everyone: Programming Fundamentals (Coursera) | Web Application Technologies and Django (Coursera)

Awards: Best DApp Winner - Hackverse (Apr 2024) | Best DApp Builder - Layer 2.0 (Mar 2024) | Best Open Innovation - MesoHacks (Sept 2022)
